

MediService Home Care services

Home Care Service

As at: April 2020

The doctor providing treatment decides which patients to register with Home Care. The doctor can prescribe “Home Care services” using the MediService prescription forms, which are made available electronically: “The doctor requires the MediService Home Care team to provide Home Care services”

If such services are provided, the following medicines do not qualify for a discount.

Hizentra	

Which patients can benefit from Home Care?

Patients with a chronic illness receiving highly specialised therapy, such as auto-immune diseases. Depending on the illness and therapy, our services can provide the following support:

- Introduction to self-application of long-term therapy (e.g. subcutaneous or intramuscular injections)
- Application of regular intravenous therapy
- Long-term support in matters relating to the symptoms of the disorder, management of the side-effects and everyday management of the therapy, also for oral medication
- Advice on using medication at home, by telephone or by video
